

Mt. Laurel, NJ Applebee's New Construction

Project Summary:

This project was completed in Mt. Laurel, NJ by Straightline Builders. Fullerton's scope included the exterior wall panels, interior walls, steel package and roof truss system. The Applebee's utilized various exterior finishes. EIFS color in Armagnac with a 10 year warranty. Cultured Stone was Golden Buckeye grouted and the Hardipanel was painted to match W2174. The FBS assembly option was selected. FBS delivered this building package in November of 2013.

Meet or Exceeding Owners Goals, Values and/or Expectations:

Straightline Builders brought in FBS to provide the Applebee's building package due to the challenges of construction on the East Coast and the challenges of winter conditions since the project started in November. The Mt. Laurel building was set in 10 days which allowed the other trades to get on-site and complete their work sooner and eliminate extra expenses. Straightline has worked with FBS on other projects and knew their customer would be happy with Fullerton's speed and quality.
