

Mankato, MN Hardee's

New Construction - QSR

Project Summary:

This project was completed in Mankato, MN working with Gray Companies. Fullerton's scope included the exterior wall panels along with the roof truss system. The base building exterior finish was Brickwal in Light and Dark Sandstone along with Golden Buff, all in a velour texture. EIFS accents in Almond and Burgundy were done in a sandpebble finish. The EIFS carries a 10 year warranty. Gray Companies had a local vendor that installed the stone on-site once Fullerton's package was installed. Fullerton also supplied the non union assembly and installation of our building panels took 3 days. Fullerton delivered this building package in mid-November 2013.

Meet or Exceeding Owners Goals, Values and/or Expectations:

The flexibility of the Fullerton Building Package allowed Gray Companies to also work with local vendor on the stone portion of the building. This building was set mid-November and Gray wanted to get the building package enclosed as quickly as possible before the onset of a cold Minnesota winter. The Fullerton package was up in 3 days and allowed Gray to avoid hefty winter condition costs. Fullerton also supplied the submittal plans for permitting the FBS building package.

Client Profile:

Established in 1959, Gray Companies, Inc. has developed an integrated system of full-range services including design/build, construction, construction management and manufacturing of architectural casework. Fullerton Building Systems, Inc. has had a long term relationship with Gray and they are a highly respected firm in Minnesota.
