

Williston, ND McDonald's

New Construction

Project Summary:

This project was a new construction in Williston, ND, built in June 2012. The exterior finishes selected were Brickwal in different color schemes, along with Boral Profit LedgeStone in Southwest Blend.

Meet or Exceeding Owners Goals, Values and/or Expectations:

FBS provided the full furnish and install package including Exterior and Interior walls, roof and all exterior finishes. Due to most of the work force in North Dakota working in the oil fields, FBS also provided the glazing to be site installed. FBS started on site once the concrete slab was in place. FBS erected and completed the exterior shell in 7 days. This speed build approach saved valuable building days helping to open this restaurant sooner.

Client Profile:

FBS worked directly with the Midwest Region of Corporate McDonald's located in Bloomington, MN, collaborating with the architect and general contractor to provide this new structure
