

# Williston, ND KLJ Office Complex

## New Construction

### Project Summary:

With the growth in North Dakota and most of the labor force working in the oil fields, FBS supplied this office facility to Williston, ND. Fullerton's scope of work included the exterior wall panels with our thin brick exterior finish in Medium 77 velour wirecut and Dryvit above in Manor White. The package also included interior walls, steel columns and beams, wood stairs, glazing and floor and roof systems. FBS provided the non union assembly to set the entire building shell.

### Meet or Exceeding Owners Goals, Values and/or Expectations:

FBS and NW Contracting worked together in the development of the plans for this project. FBS also installed most of the windows during manufacturing at the plant and worked with our glazing vendor to site install the rest on-site which was a great option since most glaziers in the area were busy or charging a premium. With the glass and assembly being handled by FBS, they didn't have to use local labor to have the building enclosed in a timely manner.

### Client Profile:

NW Contracting is a repeat customer of FBS. They are based out of Bismarck, ND and have been in business since 1983. They are a design/build general contractor who works on a wide range of projects, including: industrial, retail, commercial, restaurants, multi-units and mini storage.
